PROBLEM

Vendors wander all day for miles under rugged conditions and still aren't able to find any targeted buyers.

Oftentimes when sale is low, fruits or veggies spoil and cause wastage.

How we can solve it

We are building a web based app, where a buyer can place an order and the order will be assigned to the nearest street vendor through this we can increase the order of the street vendor

Flow

1

Buyer places a
order

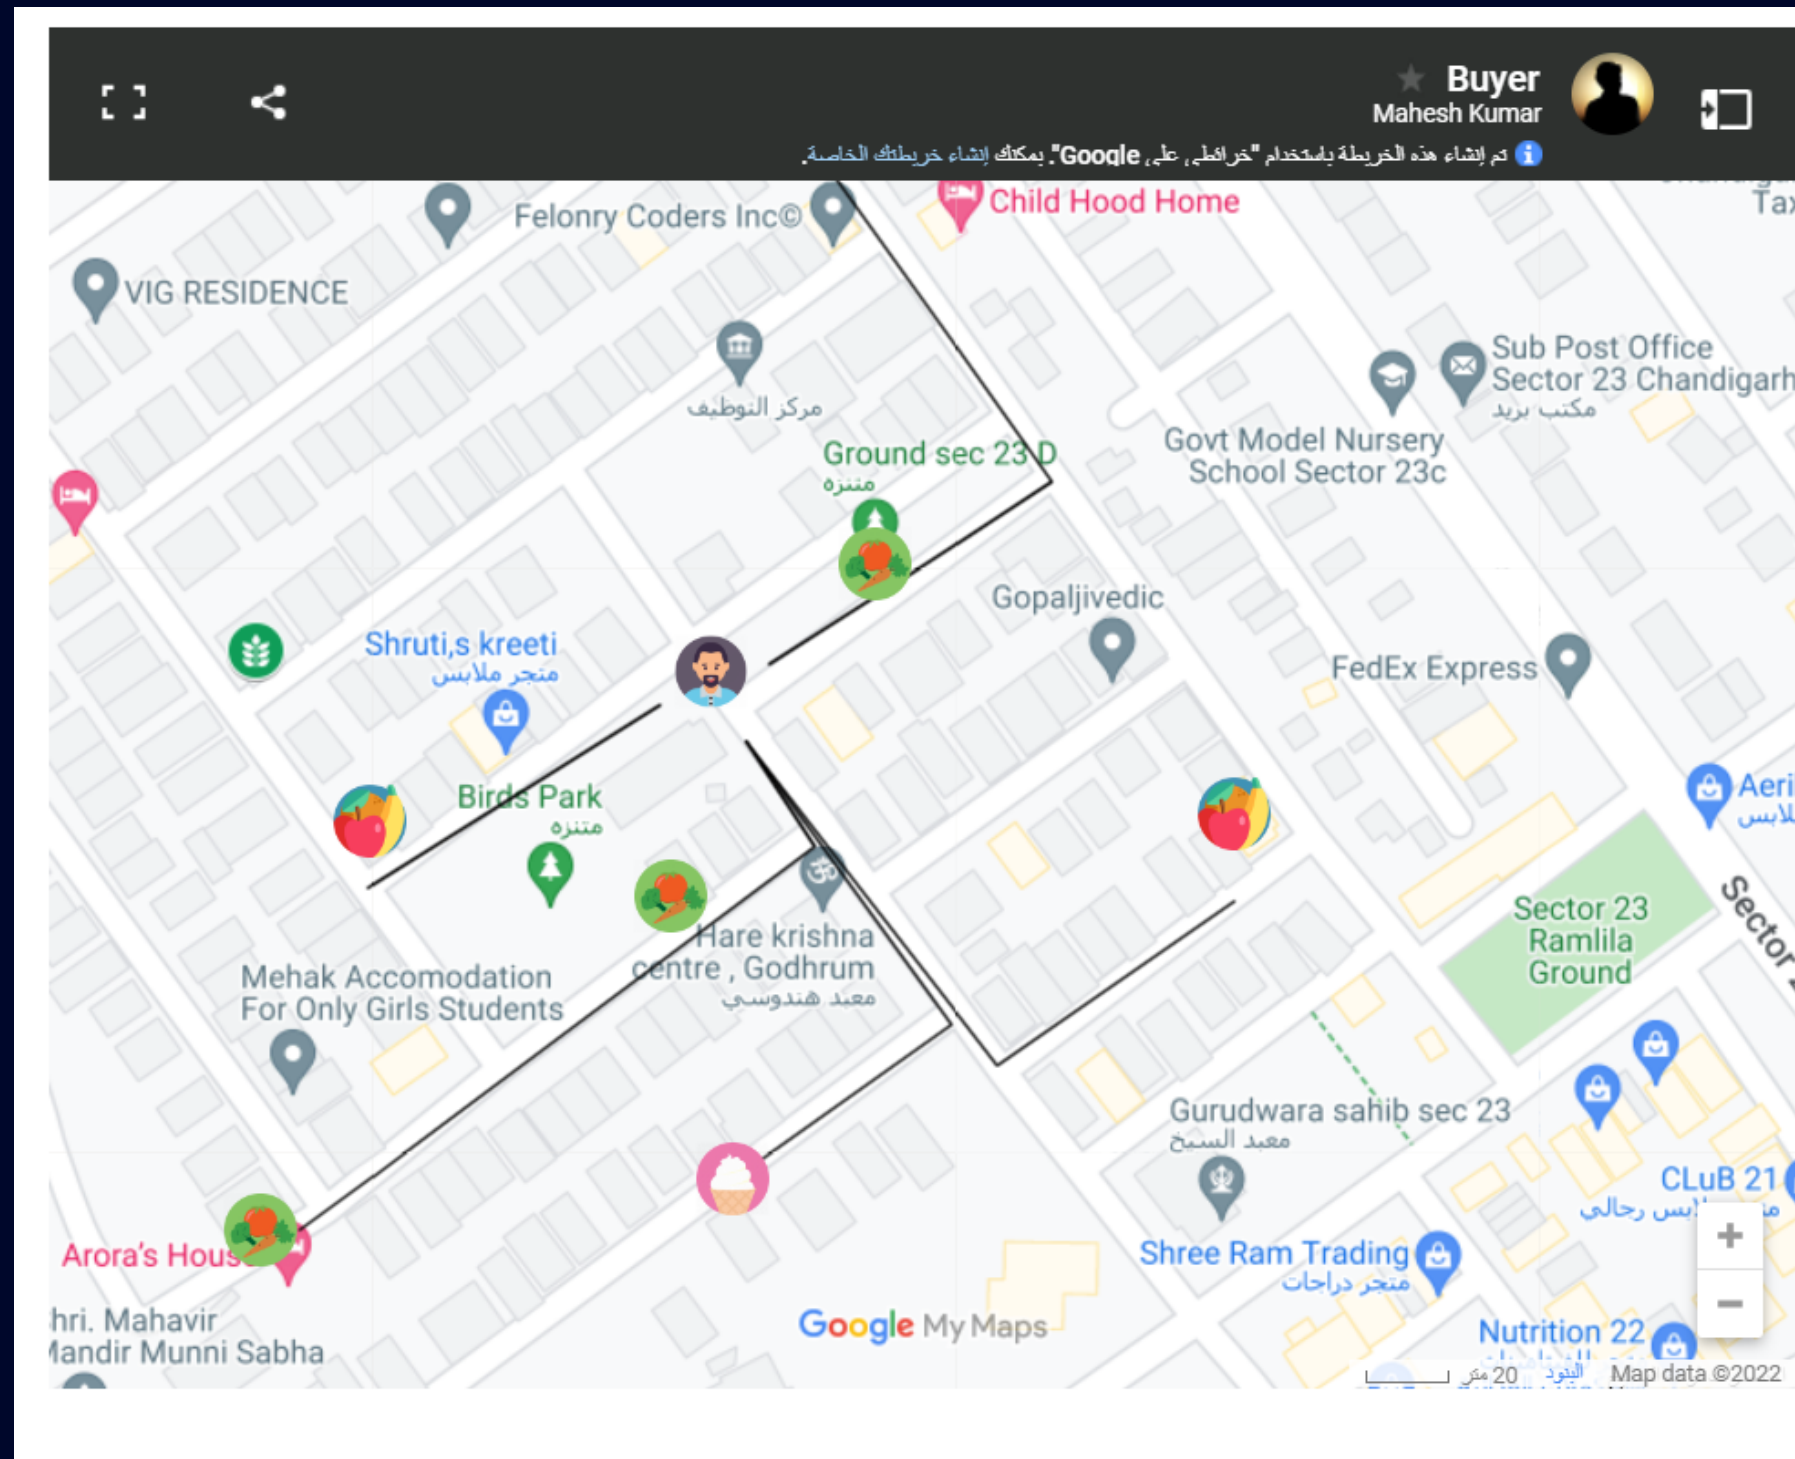

2

Nearest
Vendor get
Notified

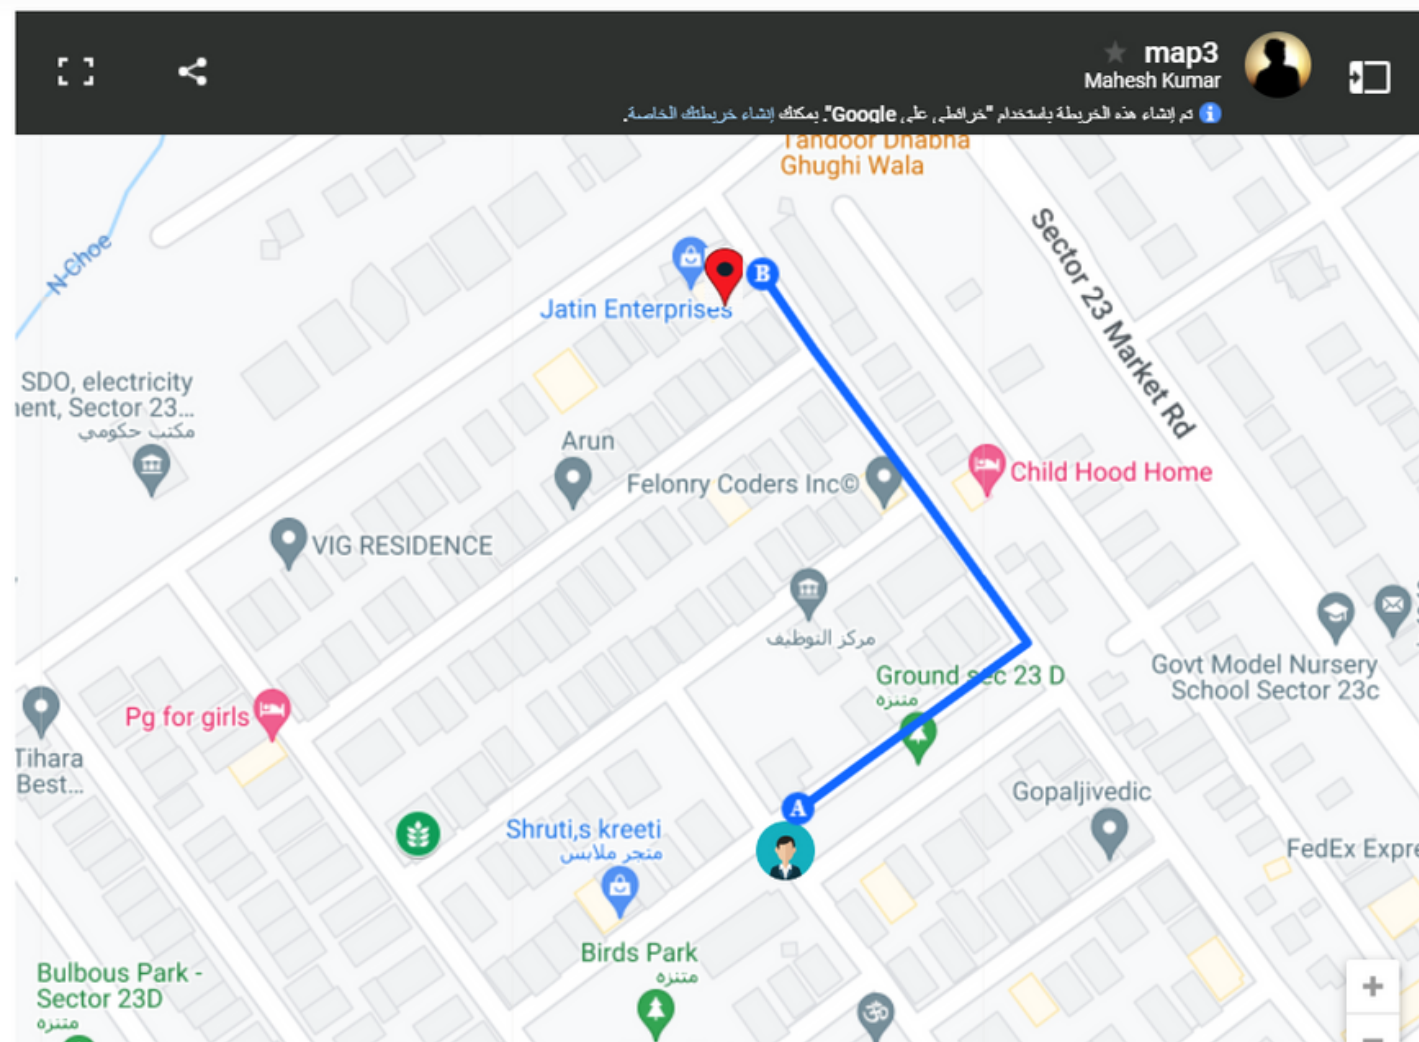

3

Street Vendor
delivers the
order to that
location

Some special features

Real time tracking of street vendors in buyer's vicinity.

New Order

ORDERS

Item Af

Item Aad

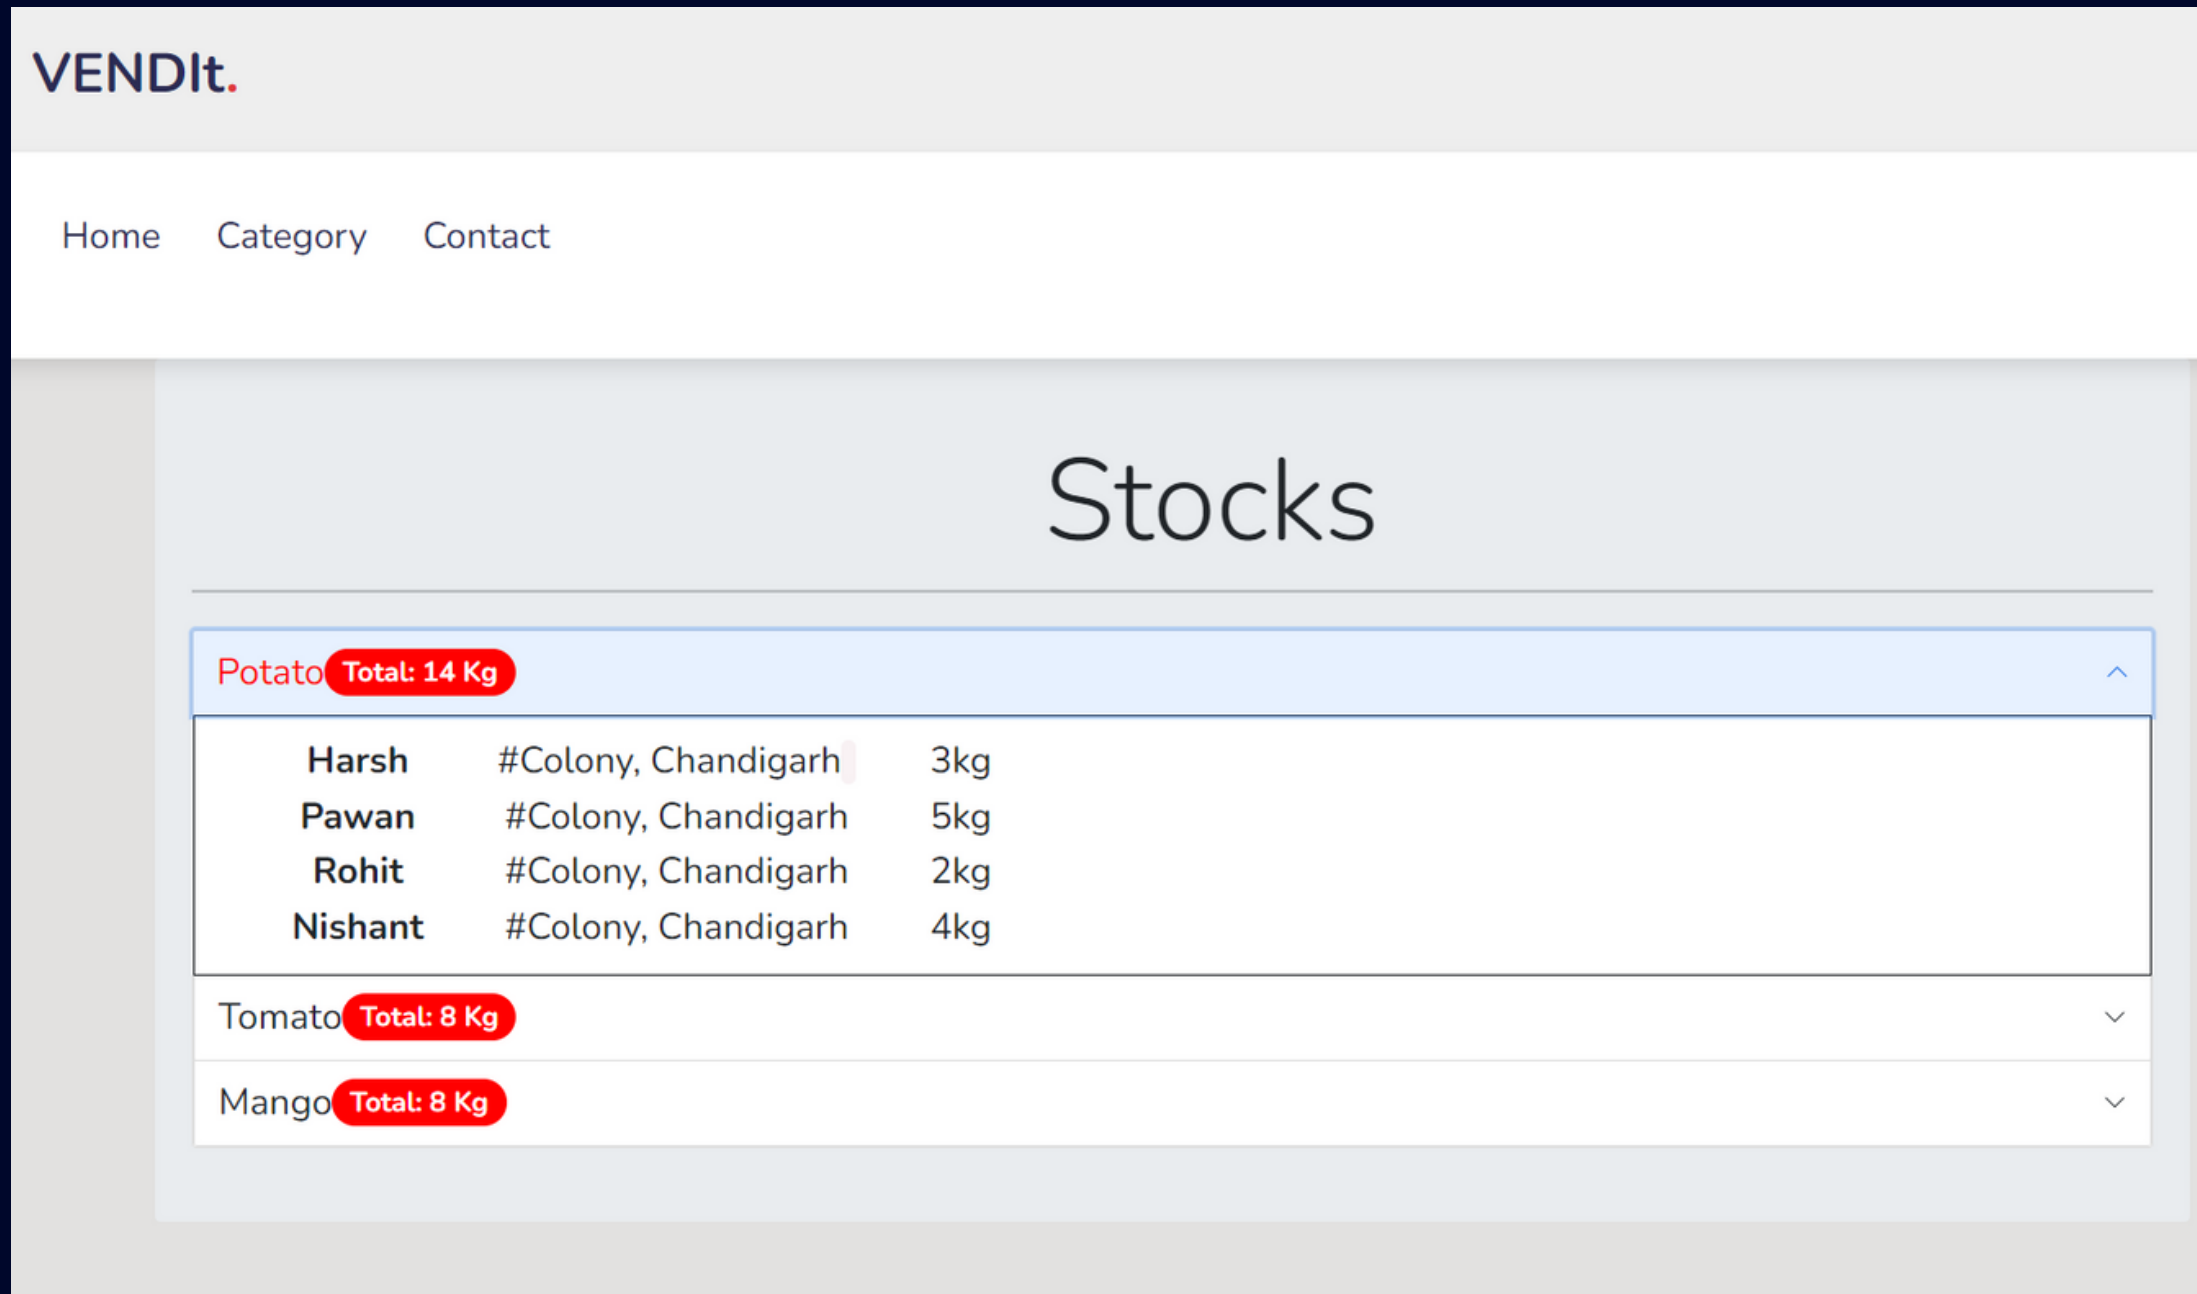

Item 3fe

Accept

Decline

Orders Left : 4

EASY NAVIGATION

Easy Mangement of Stocks in vendor's account

Thank you!
